Sino Biological has over 10 years’ experience in antibody development and production. We provide one-stop service including antigen production, animal immunization, antibody development, ELISA kit development, hybridoma antibody gene sequencing and recombinant antibody production.

**Advantages**

- **Varied Antigens**
  - Recombinant Protein
  - Natural Protein
  - Peptide
  - Cell
  - DNA

- **Advanced Technologies**
  - Optimized immunization
  - High efficiency electrofusion
  - Phage display library technology
  - Solid / Liquid-phage screening
  - Hybridoma serum-free cell culture
  - Multiple Purification Methods

- **Customized Service**
  - Optional validation: ELISA, WB, IHC, IF, FACS, ICC, HPLC, Octet, MS etc
  - Multiple screening methods at key nodes
  - Milestone Payments
  - Timely feedback and communication

**Service List**

<table>
<thead>
<tr>
<th>Service</th>
<th>Deliverables</th>
<th>Timeline</th>

Hybridoma Technology & Monoclonal Antibody Development

Detection and screening at multi-nodes

- Immunization 8-10 weeks
- Node One: Serum detection to determine the mouse for fusion
- Fusion & Screening 2-3 weeks
- Node Two: Supernatant detection to determine cells for subcloning
- Subclone 2-3 weeks
- Node Three: Supernatant detection to determine cells for proliferation
- Cell proliferation 1 week
- Production & Characterization 1 week

Phage Display Antibody Library & Monoclonal Antibody Development

What is Phage Display Antibody Library

Antibody phage display is based on genetic engineering of bacteriophages and repeated rounds of antigen-guided selection and phage propagation. This technique allows in vitro selection of mAbs of virtually any specificity, greatly facilitating recombinant production of reagents for use in research, clinical diagnostics and pharmaceuticals.

Sino Biological Inc. offers mouse and rabbit Mab development services with phage display technique

Advantages of rabbit monoclonal antibodies

- High affinity and specificity
- Perfect choice for testing mouse proteins and tissues
- Recognition of diverse and novel epitopes
- More choices for matched antibody pairs for ELISA
- Antibody gene sequences available for gene engineering

Service Process

- Immunization 8-10 weeks
- Antibody library construction 2-3 weeks
- Screening 2-3 weeks
- Vector construction 1 week
- Production and characterization 3-4 weeks
